This setout is provided as a guide only. It is the responsibility of the concreter/erector to confirm that all dimensions are correct.

Left Side

Measurements are from the outside of end girts (end bays) and/or centre of columns (mid bays) to inside of component opening size.

Right Side

Measurements are from the outside of end girts (end bays) and/or centre of columns (mid bays) to inside of component opening size.

GENERAL NOTES

These documents show the general arrangement of the building and include some items not supplied (refer to the quotation for nomination of all items to be provided). All items not nominated therein shall be supplied and installed by others.

DESIGN CRITERIA

These building plans have been prepared to comply with the standards nominated in the engineer's letter and itemised details in the attached Design Information Sheet. All plans are not to Scale.

The plans provided here are the latest at the time of print. Earlier plans provided may have become outdated due to engineering changes and should not be used. The plans and drawings are extensive and give all the information needed for a competent person to erect the building. The building is not designed to stand up by itself when it is partially complete. Consequently, construction bracing is critical during erection.

The owner has been requested to check off the BOM after the building delivery. You should check that you are able to locate all materials nominated in the BOM. You should also confirm that the length and size (including thickness), nominated in the BOM is what has been provided. Any missing items are the responsibility of the client once correct delivery has been confirmed as per Terms and Conditions of Sale.

ADDITIONAL DOCUMENTATION TO BE SUPPLIED BY PURCHASER/OWNER

- The Purchaser/Owner is responsible for:
- *Provision of Soils Report for the site and in the building area on which the building is to be erected
- *Site/Drainage Plans
- *Any other plans not covered by these engineering plans requested by the local Council or the authority

BUILDING CONSTRUCTION REQUIREMENTS

The Purchaser/Owner is to be ensured that all building construction is carried out in accordance with the Plans, the Construction Manual and the Bill of Materials (BOM).

SLAB AND/OR PIER DETAILS - GENERAL

- * The minimum size of Piers under the columns and End Wall Mullions are nominated on the Material Specifications Plan. When the slab and piers are poured as one pour, the depth of the pier is to the bottom of the slab.
- * Pier Reinforcement: for any piers over 1100mm, deformed bar to within 100mm of base and minimum 75mm top cover. Minimum side cover 75mm, maximum 100mm. Rod to be caged horizontally at least twice and at a maximum of 300mm spacing. Tie with a minimum of 6mm diameter cage tie. Where pier diameter is less than 450mm diameter, use 4 N12. For diameters equal to and over 450mm, use 4 N16.* Column supports for mezzanine bearer internal support columns are not shown and should be of the same size and spacing as the end wall mullion piers.
- * Where columns or end wall mullions have been removed, piers are not required.
- * End wall mullion spacing may move due to location of openings or doors. Check layout and component position plan, and relocate piers as required.
- * Footings and slabs, including internal and edge beams, must be founded on natural soil with a minimum allowable bearing capacity of 100kPa. Design covers soil classifications of A, S, M, H1 or H2 for a class 10 building.

- * The footing designs have been calculated with adhesion values of 0kPa, 25kPa and 50kPa for clay soils and dense sand soils only.
- * Site conditions different to those specified require a modified design.
- * Sub grade shall be excavated and compacted to a minimum of 100% standard dry density ratio and within 2% of the OMC to comply with AS2159.
- * A site specific geotechnical investigation has not been performed, uno.
- * Designs are in accordance with AS 3600:2009
- * All concrete to be in accordance with AS 3600:2009. Minimum 25 Mpa, with 80mm slump.
- * Concrete should be cured for 7 days before commencing construction of the building.

Concrete Slab

For Class A, S or M Sites

- * Slab thickness to be a minimum of 100mm with SL 72 mesh and 40mm top cover.
- * Concrete piers under Roller Door Jambs and Mezzanine Mid posts to be a minimum size as below:
C20019 - 450mm dia x 500mm deep, centered to the C Section
C20015 - 450mm dia x 400mm deep, centered to the C Section
Where heavy traffic is to go through the roller door, it is recommended that the slab edge should be thickened to 200mm deep by 300mm wide for the length between the mullions. Place an additional section of SL 72 mesh, 50mm from the base in all thickenings.

For Class H1 or H2 Sites

- * Slab thickness to be a minimum of 125mm with SL 82 mesh and 40mm top cover.
- * Edge beam 400mm deep x 300mm wide with Y12 3 bar Trench Mesh to the perimeter of the building.
- * Thickening beams 400mm deep by 300mm wide with Y12 3 bar Trench Mesh at a max spacing of 6.2m.
- * Concrete piers under Roller Door Jambs and Mezzanine Mid posts to be a minimum size as below:
C20019 - 450mm dia x 650mm deep, centered to the C Section
C20015 - 450mm dia x 500mm deep, centered to the C Section

Concrete Piers Only

For Class A, S or M Sites

- * Concrete piers under Roller Door Jambs and Mezzanine Mid posts to be a minimum size as below:
C20019 - 450mm dia x 1000mm deep, centered to the C Section
C20015 - 450mm dia x 800mm deep, centered to the C Section

For Class H1 or H2 Sites

- * Concrete piers under Roller Door Jambs and Mezzanine Mid posts to be a minimum size as below:
C20019 - 450mm dia x 1300mm deep, centered to the C Section
C20015 - 450mm dia x 1000mm deep, centered to the C Section

BRACING NOTES

- * Refer to Connection Details.
- * All Cross Bracing (roof) is achieved with 1.2mm Strap G450

- * Cross bracing is to be fixed taught and secured with 2 x 14.20 x 22 frame screws at each end.
- * Fly bracing to be fixed to the purlins/girts at all mid portal rafters, columns and end wall mullions. The spacing between fly braces is determined by column/rafter sizes as follows:

C150 - maximum 1800mm spacing
C200, C250 - maximum 2200mm spacing
C300 - maximum 2800mm spacing
C350 - maximum 3400mm spacing

- Initial measurement is from the haunch of the column/rafter, and from the rafter for any end wall mullions.
- * Where windows/GSD are placed in any bay where cross bracing is shown, then
a) this can be replaced by moving the bracing to another bay OR
b) due to the bracing provided by the window jambs, where space permits, bracing should be placed under and over the window.
- * All bracing strap ends to be located as close as practical to structural members (columns, rafters, mullions) centerline.

BOLTS

- * Unless otherwise nominated, all bolts are grade 4.6
- * All tensioned bolts shall be tensioned using the part turn method (refer to AS4100). For the erector, full details are in the construction manual.

MEZZANINE FLOOR

- *Mezzanine floor designed for 1.5kPa live loading.
- *No point loads allowed for.

OTHER MATERIALS NOTES

- * All Sheeting, Flashing and framing screws are Climaseal 4.
- * All purlin material has Z350 zinc coating with minimum strength of 450MPa.

SUBSIDENCE ADVISORY NSW
DEVELOPMENT APPROVED – DAVID SEDGMAN
19 Jun 2018
This plan is approved under section 22 of the Coal Mine
Subsidence Compensation Act 2017, and is valid for five (5) years
from today and includes any condition of approval attached.

This approval is subject to levels & heights shown on plan being
accurate & footings designed to comply with AS2870 or relevant
Australian Standards
